# Executive Summary

In the scatterplot below, each dot represents a commit or modification of a specific file during the project's lifetime and the color is unique to the author.

All of the most recent changes occurred in 2021 and saw several new files and changes committed. Most new source files were pushed to the repository using the .kt source code format, although the project still has a majority of .java based source code. The repository has not seen an update since, likely an impact of the Covid-19 Pandemic.

The project's original creator, Scott Alexander-Bown, was the primary one responsible for the most recent additions. Meanwhile, Matthew Rollings was another main contributor, but saw most of his contributions in 2020 and earlier.

Overall, most work can be seen to have been contributed in 2015 and 2017 at 113 commits combined. 2016, 2018, and 2019 saw the least amount of activity in the project's lifetime at a total of 56 commits over those 3 years. 2020 and 2021 saw a collective 52 commits and there have been no new activity since in the project.

Over the course of this assignment, I quickly discovered I lacked several necessary and valuable libraries and found the "git install" command to be by far my most used command in order to allow me to complete my task.
